

AMITKUMAR PANDEY

Full Stack Software Engineer

Mumbai, Maharashtra, India | +91 8286866417 | pandeyamit5670@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Results-driven Software Engineer with 5 years of experience architecting and scaling high-performance web applications and distributed systems. Currently serving as a Module Lead, specializing in event-driven serverless cloud architectures (AWS), Next.js, and .NET microservices. Proven track record of leading end-to-end enterprise migrations, optimizing Core Web Vitals at scale, and delivering resilient, high-traffic solutions.

SKILLS

Languages: C#, TypeScript, JavaScript, SQL, HTML/CSS

Backend & Frameworks: .NET Core, Node.js, Next.js, Angular, RESTful APIs, Microservices

Cloud (AWS): Lambda, EventBridge, Step Functions, S3, CloudFront, CodeBuild, DataSync, CloudFormation, CloudWatch

DevOps & Tools: Gitlab, Jenkins, Docker, JMeter, Cursor, GitHub Copilot

EXPERIENCE

Zeus Learning

Mumbai, India

Module Lead

July 2025 – Present

- Architected the migration of around 150,000 research papers to an enterprise headless CMS (Kontent AI) utilizing a scalable Next.js SSG pipeline, decreasing Mobile Largest Contentful Paint (LCP) by 60% (4.3s to 1.7s) and achieving near-zero Cumulative Layout Shift (CLS).
- Engineered an event-driven serverless architecture (AWS Step Functions, EventBridge, Lambda) to automate API content synchronization, alongside a parallelized CodeBuild and DataSync export pipeline serving artifacts via S3 and CloudFront.
- Optimized React hydration and reduced API overhead by executing silent authentication checks through header-injected scripts, and deferred third-party trackers (Osano, Amplitude) to enhance rendering speeds.
- Accelerated the project development lifecycle and improved code delivery efficiency by integrating AI coding assistants, specifically Cursor and GitHub Copilot, into the daily workflow.

Senior Software Developer

July 2023 – June 2025

- Directed a 5-member team through the end-to-end delivery of a customized enterprise EdTech solution for a key client, driving technical feasibility analysis and architecture planning during the discovery phase.
- Architected a high-throughput, event-driven daily synchronization system across 5 content models using AWS EventBridge, SQS queues, and .NET microservices, integrating Microsoft SkiaSharp for real-time asset resizing.
- Designed unified architectural integration layers and authentication flows for Microsoft Education, Google Workspace (Drive, Classroom), Clever, Wonde, and LTI 1.3 with deep-linking.
- Enhanced platform security and performance by implementing CI/CD pipeline validations to block unapproved public APIs, patching an LTI access vulnerability, and deploying Elasticsearch autocomplete for the experiment library.
- Engineered an event-driven data gathering and reporting module to track granular content type usage and generate automated organizational summaries.

Software Developer

June 2021 – June 2023

- Spearheaded backend performance optimization for a critical course launch and attempt submit module, increasing concurrent user support by 5x (199 to 999 users under an 8s ramp-up) by introducing Redis caching, optimizing database stored procedures, and offloading asynchronous processes to RabbitMQ.
- Delivered targeted feature enhancements for the flagship SaaS platform, including complex grade calculation logic, Google Classroom integrations, and a robust bulk metadata CSV import system.

EDUCATION

Bachelor of Engineering in Information Technology

Navi Mumbai, India

University of Mumbai - Datta Meghe College of Engineering, CGPA: 8.89/10

July 2017 – June 2021
